HOUSING IN YUGOSLAVIAFAILURE OF GLINA REBUILDING PROGRAM -- Vjesnik, No 1008, 30 Jul 48

Last year 319 dwellings were built in the Glina district, according to the plan for rebuilding burned houses, which provides that 280 more be built this year. However, work has not yet begun on a single one; and although plenty of building material is available, none has been transported to the building areas. The chief bottleneck is the brick fields in Majske Poljane, Dragotina, Gradec, and Grabovac, which can produce only about 70 percent of the necessary brick. The last 6 months have been wasted in waiting for cooperative houses to be built first. Coordination between the two building programs is badly needed.

This year's budget for reconstruction of burned villages in this district amounts to 6 million dinars, enough to finance only special projects and to buy materials, though the greater part of the construction will be voluntary.

COOPERATIVE DWELLINGS IN DALMATIA -- Politika, No 12991, 1 Aug 48; No 12995, 6 Aug 48

Seventeen cooperative apartment houses were finished in Dalmatia by 26 July. The best results were attained with five each constructed in Sibenik and Znin. Twenty-five more are under construction in Dalmatia.

COOPERATIVE DWELLING IN CROATIA -- Politika, No 12991, 1 Aug 48

On 27 July the first cooperative apartment house was opened by the People's Committee of Lopari near Tuzla. The house has a large moving picture salon with a stage. The house was built by the voluntary labor of members of the Lopari Front, whose quota calls for the completion of eight apartment houses and three schools by 15 October.

NEW SETTLEMENT IN VOJVODINA -- Politika, No 13031, 17 Sep 48

The village of Radicevicevo, built by voluntary youth labor a year ago for colonists from the interior, is now a flourishing farm settlement beside the road which runs from Stari Becej to Srbobran. The new village has its own cooperative, youth headquarters, and elementary school. All 150 households in the village belong to the cooperative.

PUBLIC WORKS IN BOSNIA -- Borba, No 185, 1 Aug 48

This year 134 kilometers of road and 170 kilometers of roadside water conduits were built by voluntary labor in the Jadar district. Eighty-three hectares of wasteland were forested and about 400 seedlings planted. Two hundred and fifty hectares of farm land were cultivated for the families of fire fighters and poor families. A cooperative apartment house was built 5 days ahead of schedule.

PLANS FOR THE NEW NOVI SAD -- Rad, No 110, 6 Aug 48

The present city of Novi Sad was built without any plan. Even the water system, plans for which have been discussed for 60 years, has never been built. It has a large but scattered population, much waste space, and irregular streets often too narrow for regular traffic.

The Academy of Urbanization of Serbia has drawn up plans to transform Novi Sad into a modern city of about 200,000 inhabitants within 15 years, with rail transportation removed to the northern part, industrial centers separated from the residential, and freight transport routed over a peripheral freight highway. It will have a school center near the Danube, a large athletic stadium for 30,000 spectators at the end of the municipal way system and a smaller stadium for about 12,000. Houses will be independent buildings with complete lawns and sunlight. Work has already begun on the municipal water system and some buildings.
